

1 51245/VGG/N74

ABSTRACT OF THE DISCLOSURE

5 An ink jet-recording sheet for forming recorded images
using liquid ink comprises a combination of specific
compounds, for instance, 1,2-bis (2-hydroxyethylthio) ethane
and a homopolymers or copolymer of diallylamine type compounds
such as poly (diallylamine) hydrochloride, poly (diallylamine)
10 sulfate, poly (diallylamine) phosphate or poly (diallylamine)
acetate. The ink jet-recording sheet can ensure a high density
of printed images, can provide images having high quality,
shows only a slight color change and discoloration of printed
images even when exposed to ozone gas and is excellent in the
15 long-term shelf life.
